

DO YOU HAVE WHAT IT TAKES TO ENGINEER OUR FUTURE?

We need more engineers to harness their capabilities to build a better world.

The **Engineering Competency Model**, depicted below, outlines the core competencies for advancement and success in the engineering profession.

When engineers apply these fundamental skills in their daily work, they **design**, **improve**, and **sustain** the systems and structures we rely on.

To learn more about the Engineering Competency Model, a joint initiative of the U.S. Department of Labor and the engineering community from industry and academia, visit: www.careeronestop.org/CMC/engineering.

Made possible with support of the
United Engineering Foundation.
